General Eligibility Requirements

- The table below contains eligibility requirements and expected incentive values. Actual incentives may vary based on other program requirements and guidelines.
- Eligible products must be installed and used in accordance with their rated condition.
- All installations must be installed in accordance with all applicable local, state, and national codes and ordinances.
- Program approval is required prior to purchase and installation for custom measures.

- All new lighting fixtures, retrofit kits, and components must carry the appropriate designated Underwriters Laboratory (UL) or Electrical Testing Laboratory (ETL) label.
- All installations shall be designed and installed in accordance with best practices such as the Illuminating Engineering Society of North America (IESNA) Lighting Handbook.
- DesignLights Consortium® categories are listed under the Eligibility Criteria. Installed fixtures must be listed under that category to qualify for incentives.
- If the proposed equipment does not meet the eligibility requirements or is not listed below, the applicant may still be eligible for a Custom Incentive. Contact a PSE&G representative for more details.

1. A network lighting control system controlling efficient luminaires are complete lighting control systems with reporting, trending, and BMS/EMS/EPMS integration
2. Luminaire level lighting control (LLLC) – with a local or cloud server that reports back to a central point, server, or cloud server. The sensor installed for each luminaire or kit is directly integrated or embedded into the form factor during the luminaire or kit manufacturing process.
3. Luminaire level lighting control (LLLC) – without a local or cloud server and does not communicate with a server continuously. An example of this would be an LLLC system that communicates locally via Bluetooth to a smartphone lighting control app. The sensor installed for each luminaire or kit is directly integrated or embedded into the form factor during the luminaire or kit manufacturing process.

- Efficiency requirements to comply with ASHRAE.
- An AHRI Certificate is required for new electric HVAC units. AHRI Certificates can be downloaded from <http://www.ahridirectory.org>.
- Manufacturers Specification Sheet Required

- Projects are required to provide the total energy savings of the measure(s). Energy savings analysis must be supported by existing and proposed facility data, such as operating schedules, EMS/BMS data, etc.; standard assumptions and baseline must be set in cases where EMS/BMS data is unavailable.
- In the absence of energy analysis or model, Pre and post-installation M&V may be required. Adjusted savings calculations may be required depending on the results of the metering.
- The energy savings calculations must only include the energy savings related to the custom measure(s).
- **Certain measures may require pre and post-install M&V for savings validation. In such cases, data points essential to analyzing the savings will be communicated, and depending on the SOW, pre, and post-data measurement timeframe will be set; in case acceptable EMS/BMS data is unavailable, a separate M&V will be required for the set timeframe.**
- Proposed measures will not be eligible for Custom Measure incentives if a Prescriptive incentive is available. Proposed measures must meet or exceed mandated/industry standards & codes where applicable. Applicability of codes & standards will be determined by PSE&G's engineering staff during the application review process.
- **State energy code is ASHRAE 90.1-2016. In cases where ASHRAE 90.1-2016 does not apply, other applicable industry standards will be used, such as the Consortium for Energy Efficiency (CEE), EPA ENERGY STAR, Design Lights Consortium, NEMA, Federal Title 10 or other established resources such as current New Jersey baseline studies and other market research; experience of the New Jersey utilities; or utility/public program experience from other comparable jurisdictions.**
- Final rebate/incentive payment is based upon installed equipment specifications, operating data, and final energy savings, and may be lower than the preapproved amount.
- Program approval is required prior to purchase and installation for custom measures.
- Custom project incentives are **capped at 50% of total project cost.**
- Customer/Contractor must complete and submit Data Collection Forms (DCF) for measures as communicated by the PSE&G engineering team. Note that DCFs are available for most measures mentioned in the below table. Anywhere a DCF is not available or developed, the customer/contractor must submit supporting information detailing the measure parameters required for energy savings analysis.
